From the collection of:

Mike Jackson, FAIA

The purpose of this book is to aid customers in selecting replacement parts for Kohler fittings. Exploded views illustrate the parts which make up the complete fittings, each being numbered for purposes of identification and ease in ordering. This book shows the most widely used fittings in the Supplement to Brass Section of K56 Catalog issued in 1958.

When ordering, please list:

1. Fitting number
2. Part number
3. Description

If it is necessary to order a part for a fitting not illustrated, send the part with the order. Order should give plate number of complete fitting for which part is needed.

KOHLER FITTINGS

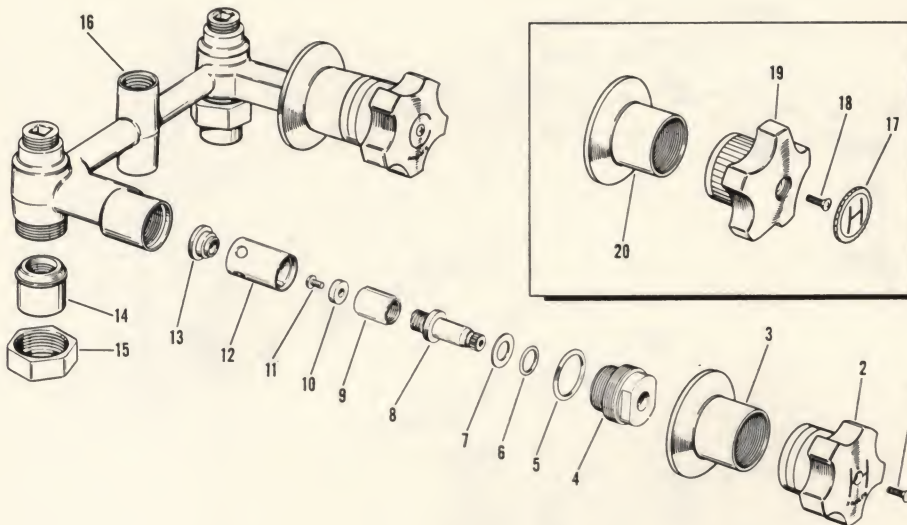

All-Brass

Brass fittings on plumbing fixtures control the flow and temperature of water, and operate the drains. This function, involving forces of movement, pressure, and temperature, subjects certain parts to abrasive wear and erosive action.

Every effort is made by Kohler Co. to manufacture fittings that will give long, satisfactory service. To achieve this, Kohler fittings are All-Brass. Exposed surfaces are chromium plated over a coating of nickel. Valve units confine wear to the unit instead of the valve body. The same unit is interchangeable in all Kohler fittings and is easily replaced if necessary.

Bodies are durable and full-size with large waterways. Smooth working, double-action threads provide finger-tip control of the water flow.

This book will simplify ordering replacement parts for you and your customers.
